Setting the right expectations for this course

- This course is all slides based
  - I'm assuming you have experience using AWS
  - No hands-on will come with the course. You should know the basics
  - It's fast paced. Your time is valuable. Feel free to slow me down to 0.75x
- If you just passed the AWS Certified Solutions Architect Associate cert
  - I recommend you go through AWS Certified Developer, SysOps & DevOps
  - I know you are eager to get the SAP certification, but take your time
- The AWS knowledge needed for the SA Pro exam
  - Is extremely similar to the knowledge for SAA
  - The questions are more complex, and knowing details is very important
  - It's possible that multiple answers are correct, but one is the most appropriate

The AWS Certified Solutions Architect Professional Exam

- Is HARD
- Tests real AWS experience
- Will test you on some very subtle service features

- I have included quizzes for every single section BUT…
  - The quizzes are not "scenario based" / "exam-like"
  - They only help you extract some important notions out of what you're learning
  - This is my optimal way of teaching you about specific topics
  - Please trust my teaching process

Practice Exams

- This course does not come with practice exams
  - Practice Exams come separately
  - I really want to focus this course on the knowledge needed

- Warning:
  - This course is on the NEW CERTIFICATION (SAP-C02)
  - You may see outdated content in other practice exams, other courses, etc…
  - This course is not incomplete, it's more targeted towards the knowledge you actually need to know to pass the exam
